EDUCATION

2016 - 2020

(R.G.P.V) TECHNOLOGICAL UNIVERSITY

- Bachelor of Engineering - Computer Science
- GPA: 7.8 / 10

TECHNICAL SKILLS

- Azure
- Azure DevOps
- Terraform
- Git
- Jenkins
- Ansible
- Kubernete
- Bash
- Python
- AWS
- GCP
- Artifactory

LANGUAGES

- English (Fluent)
- Hindi (Fluent)

PROFILE

DevOps Engineer experienced in IaC using Terraform to provision and manage Azure AWS and GCP IaaS and PaaS. Skilled in CI/CD automation, cloud cost optimization, multi-cloud migrations (Azure, AWS, GCP), and Kubernetes-based application delivery.

WORK HISTORY

1. NEUDESIC AN IBM COMPANY

Cloud DevOps Engineer

OCT-2024 - PRESENT

ACP Azure Platform

- As a Cloud Engineer, designed and deployed modular Azure and AWS infrastructure using Terraform to create scalable and reusable environments.
- Automated CI/CD pipelines in Azure DevOps to provision IaaS and PaaS resources and deploy applications end-to-end.
- Managed Kubernetes workloads with optimized Kubernetes resource usage, monitoring, and security compliance.
- Hands-on experience with Azure Databricks and Python for data processing and transformation workflows.

Ploceus Terraform modules

- Developed reusable Terraform modules to standardize Azure resource provisioning across environments, reducing code duplication and increasing consistency.
- Integrated modules with Azure DevOps pipelines, enabling seamless infrastructure deployments as part of automated CI/CD workflows.

Cloud Activation Project

2. LTIMINDTREE

MAR-2021 - OCT 2024

Cloud Engineer

- Managed Azure cloud operations, including incident handling and resolution, ensuring high availability and performance.
- Spearheaded incident response strategies, swiftly addressing and resolving critical issues impacting Azure infrastructure and services.
- Conducted in-depth root cause analysis (RCA) for incidents, implementing preventive measures to mitigate future occurrences.
- Designed and managed Kubernetes (AKS) clusters to deploy, scale, and monitor containerized applications with improved reliability and automation.

Cloud Operation Project

- Provisioned Azure and GCP resources using Terraform(IAC) and PowerShell for efficient deployments.
- Reviewed Azure infrastructure designs with architects to improve cost and security.
- Kubernetes deployments with Docker, Jenkins CI/CD, ACR, and Python automation.
- Implemented monitoring and alerting to enhance platform reliability and incident response.

Blue Cloud Migration Project

- Completed successful migrations of diverse applications to Azure, overseeing the seamless transition of an on-premises application and another from GCP

CERTIFICATION

- AZ-104 (Microsoft Certified: Azure Administrator Associate)
